Bastille Day 14 July 2002 is one of these examples. But for almost two years, it's been impossible to find them on the list of approved Free Software. In the end, it's worth waiting a little longer. Bastille Day celebrates the fall of the Bastille, a fortress of the French monarchy which symbolized the power of the monarchy. It's been used as a word for any uprising against royalty in France ever since. At 14 July 2002, the Bastille celebrated its 200th birthday, and a bunch of journalists came to commemorate this special event. They took with them their digital cameras to record the entire festivities, including a barbecue and even a visit to the Bastille's prison. The day's filming showed journalists happily taking pictures in the house of an elderly couple, Mr and Mrs Coombes. The French side is the rightful owner of the copyright of these images. During Bastille Day, the wife goes to the fridge to find that their camera is fully charged, so they're able to use their pictures. But the husband, worried about the images that could be in the hands of photo agencies, decided to take a backup and delete them from the memory card. Because it's impossible to delete photos from a camera with a USB link, a momentary hardware failure occurred before deleting, and the backs of the images remained on the memory card. This incident provoked the censorship of images. PhotoMonkey has been quite so nice to them. Because there are several cases where images might be protected by copyright, PhotoMonkey has to be careful. If someone asked for the "backups", we were obliged to delete the images, and we called the Bastille's deputy mayor's office for a solution. The subject asked for extra value, but we didn't have any photo shop software compatible with Windows 95 that would be able to meet his desire. PhotoMonkey has been tested in a GNU/Linux system, but it's not easy to install Linux on the family computer. So we called our compatriot, Jean-Luc Moudenc, who was willing to help us. A few days later, he came to the house of b7e8fdf5c8

Field of the Invention This invention relates generally to measuring apparatus for measuring the size of holes in the floor of swimming pools, and more particularly to apparatus which is universally adjustable to accommodate holes of differing shape and size. 2. Description of Related Art The floor of a swimming pool, which typically comprises a concrete slab, is covered with a porous cementitious material commonly referred to as a xe2x80x9cslurryxe2x80x9d. After the pool is filled with water, the hole which must be patched is generally sufficiently large to allow the water to pass through to a drain which leads to the water supply. It is generally desirable to make the size of the hole as small as possible to reduce the amount of material required to repair the hole. The repair material is commonly xe2x80x9cslurryxe2x80x9d which is a mixture of sand and cement, with water, such that when mixed and allowed to set, the resulting cast material has an appropriate hardness and density to provide a permanent base for a swimming pool floor. However, the slurry has a density significantly less than that of the floor on which it is placed, and as a result of the unevenness of the cement slurry
